The above table provides a concise overview of the monthly actual, year-to-date actual of the operating expenditure, capital expenditure, and age analysis. The full year forecast as seen the table above takes in the account the original budget less the YTD budget plus the YTD actuals, this therefore gives a projection based on the TYD performance on how the municipality will perform for the financial year in terms of the original budget.

#### Liquidity

#### 4.2 Liquidity Management

#### 4.2.1 Cash Coverage August 2025

Purpose/ Use of the Ratio

#### Cash / Cost Coverage Ratio (Excl. Unspent Conditional Grants)

The Municipality as at end of August 2025 could take **48 months** to pay for its day-to-day expenses using just its cash reserves as per the information reported in the monthly financial statements.

**Current Ratio:** is calculated by a total of Current Assets/ Current Liabilities.

Budgeted Current Ratio: R 430,240,000/ R 176,837,000 = R 2.43:1

Actual Current Ratio as at 31 August 2025: R 521,757,000 / R 157,727,000 = 3.31:1

The current ratio is a liquidity ratio used to measure whether the municipality has enough resources to meet its short-term obligations and provide for a risk cover to enable it to continue operations at desired levels. A good ratio is 1.5- R 2 for every R 1 owed. The budget showed a R 2.43:1 ratio and actual ratio as at 31 August 2025 is: R 3.31: R 1 which is above the norm.

Acid test Ratio: (Current Assets – Inventory) / Current Liabilities

Budgeted Acid test Ratio: R 430,240,000 - R 3,784,000) / R 176,837,000 = 2.41:1

Actual Acid Test Ratio as at 31 August 2025:( R 521,757,000 - R 3,753,000) / R 157,727,000 = 3.28:1

The Acid test ratio, commonly known as the quick ratio, uses an organisation's balance sheet data as a indicator of whether it has sufficient short-term assets to cover its short-term liabilities. The acid test ratio disregards current assets that are difficult to quickly liquidate such as inventory. The acid test ratio may not give a reliable picture of an organisation's financial condition if the municipality has accounts receivable that take longer than usual to collect or current liabilities that are due to the municipality but have no immediate payment needed. A good ratio is R1 for every R1 owed. Which shows that the municipality would be able to pay it short term liabilities with its easy liquidated short-term assets.
